OUR BAKERY WEBSITE

Website Explanation and Project Documentation

This bakery website is designed to display different bakery products in a simple and attractive way. The screenshots provided show three product-category pages: Cakes, Pastries and Cookies. Visitors can use the navigation menu to move between the different sections of the website.

Project Overview

Website section	Purpose
Home	Introduces the bakery and provides an entry point to the website.
Cakes	Displays available cakes with product images, names and prices.
Pastries	Shows pastry and sweet treat options with their prices.
Cookies	Displays different cookie varieties and their prices.
Puffs	A navigation section intended for displaying puff products.
Contact	A section intended to provide bakery contact or enquiry information.

Common Design Features

- **Colour theme:** A dark maroon header, light peach navigation bar and cream background create a warm bakery-style appearance.
- **Navigation menu:** Home, Cakes, Pastries, Cookies, Puffs and Contact links help visitors move around the website.
- **Product cards:** Each product is presented in a white card with rounded corners and a soft shadow.
- **Product images:** Photographs help visitors identify the bakery items.
- **Product names and prices:** Each card clearly displays the item name and its price in Indian rupees.
- **Consistent layout:** The same header, menu, colours and card style are used across the category pages.

1. Cakes Page

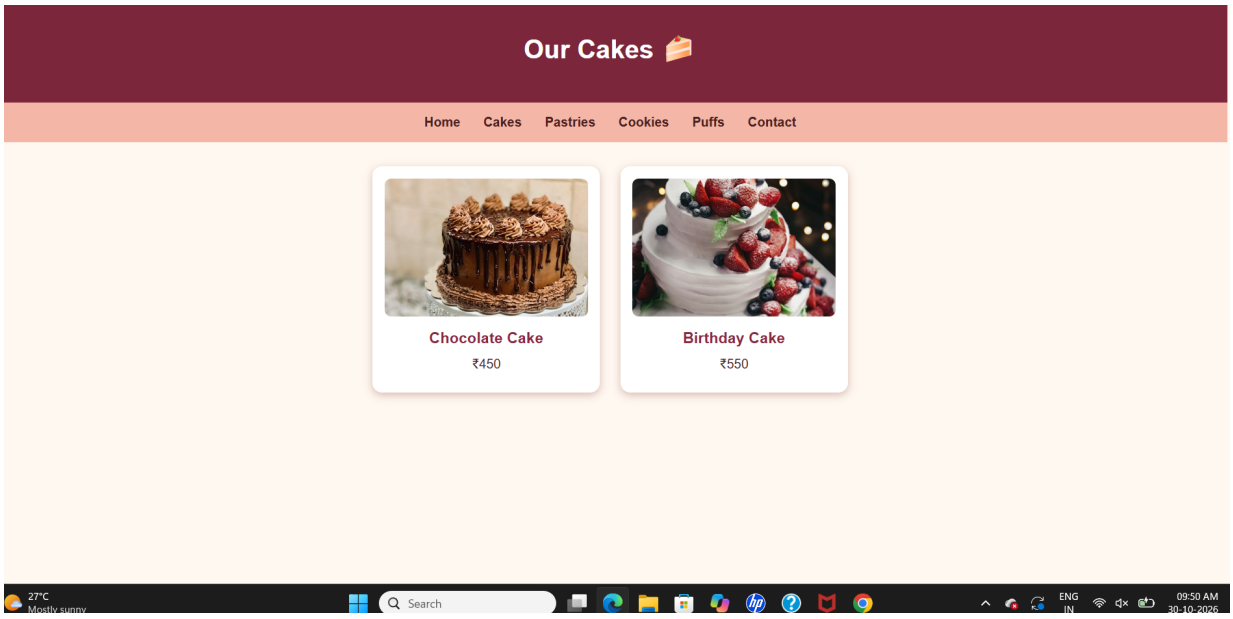

Purpose: The Cakes page displays the cake varieties available in the bakery.

Products displayed:

- **Chocolate Cake – ■450:** A chocolate cake shown with chocolate frosting and decoration.
- **Birthday Cake – ■550:** A celebration cake decorated with cream and fresh berries.

Page explanation: The page title, cake images, product names and prices allow visitors to compare the available cakes quickly. The navigation bar gives access to the other bakery categories.

2. Pastries Page

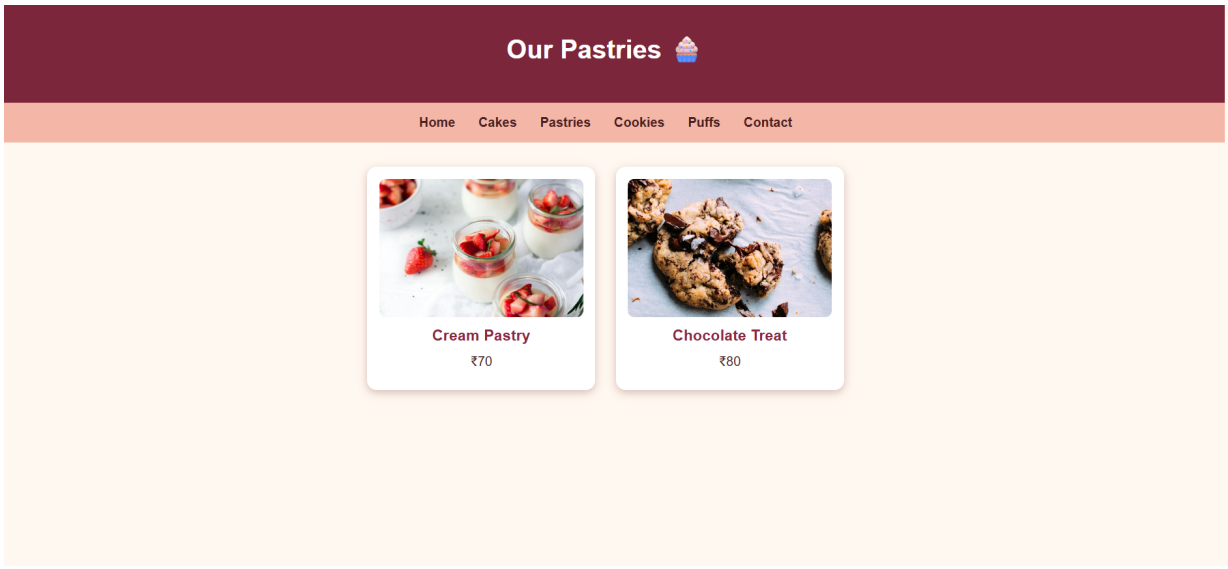

Purpose: The Pastries page presents pastry-style desserts and sweet treats.

Products displayed:

- **Cream Pastry – ■70:** A dessert served in small cups with cream and fruit.
- **Chocolate Treat – ■80:** A chocolate-based baked treat displayed as a sweet snack option.

Page explanation: The two product cards show the pastry images, names and prices. This simple arrangement makes the page easy to read and helps visitors identify the items they may want.

3. Cookies Page

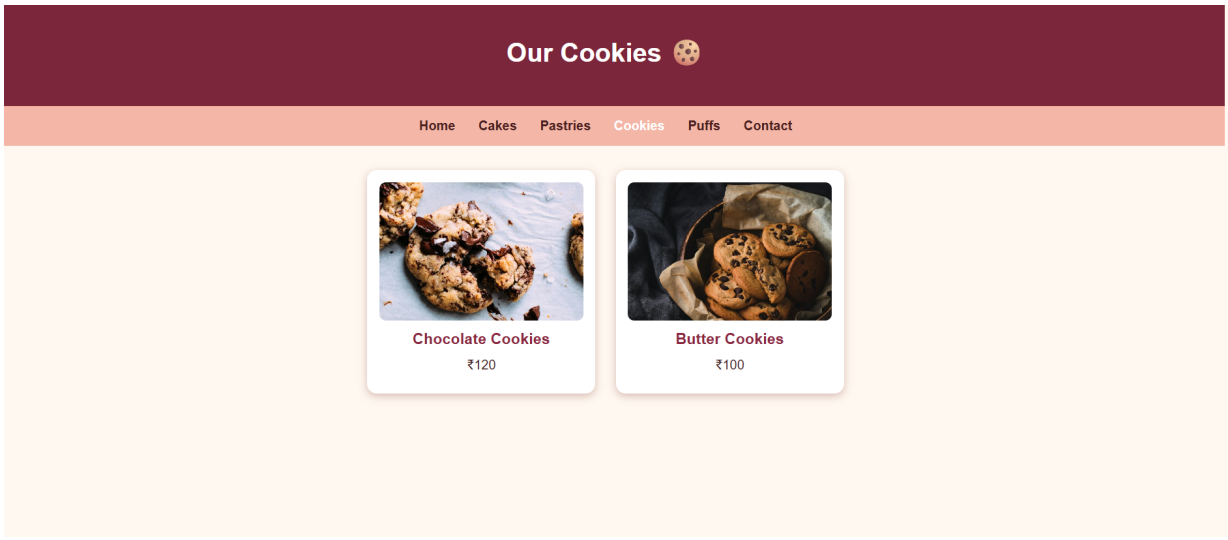

Purpose: The Cookies page displays the cookie varieties offered by the bakery.

Products displayed:

- **Chocolate Cookies – ■120:** Cookies containing visible chocolate pieces.
- **Butter Cookies – ■100:** A selection of round butter cookies displayed together.

Page explanation: The page uses the same product-card design as the Cakes and Pastries pages. This consistency makes the website feel organised and familiar as visitors move between categories.

How the Website Works

- The visitor opens the website and sees the bakery navigation menu.
- The visitor selects a category such as Cakes, Pastries or Cookies.
- The selected page displays product cards containing images, names and prices.
- The visitor can use the navigation menu to open another category or the Contact section.

Suggestions for Improvement

- **Add product descriptions:** Include short details such as flavour, size or ingredients where appropriate.
- **Add an order option:** Product cards could include an Order Now button connected to an order form or contact method.
- **Complete all menu sections:** Add the Home, Puffs and Contact pages if they are not already created.
- **Make it responsive:** Use CSS media queries so product cards fit mobile phones and tablets.
- **Use descriptive alt text:** Add suitable alt attributes to product images for accessibility.
- **Keep prices updated:** Check that displayed prices match the bakery's current product list.

Conclusion

The bakery website provides a simple and attractive way to present cakes, pastries and cookies. Its warm colour palette, clear navigation menu, product photographs and price labels make the pages easy to understand. The same layout across categories gives the website a consistent design. Adding the remaining sections and useful ordering features can make it a more complete bakery website project.
